

CHAMPION[®]

PRODUCT RELEASE

Champion Nitrogen Advantage

Nobody knows air as good as Champion. Each of the Champion generators are mounted on 60 or 80 gallon ASME code receivers and are shipped complete with a hand held nitrogen analyzer, automatic shut off switch and filter replacement indicators. The system was engineered to use a membrane to separate the nitrogen from the oxygen.

Nitrogen has been proven to increase tire life, improve automotive fuel economy, eliminate rim rust for tires, better tire pressure retention, and eliminates static when spray painting. Organizations like NASA, NASCAR, and the military have been using nitrogen as an air substitute for years.

The Champion Advantage Nitrogen Generator can be connected to an existing compressed air system or can be ordered with a new system. A variety of tire sizes can be accommodated.

For over 85 years, Champion is the leading manufacturer of single acting reciprocating air compressors, supplying shop and industrial applications. The manufacturing plant is located in Princeton, Illinois.
